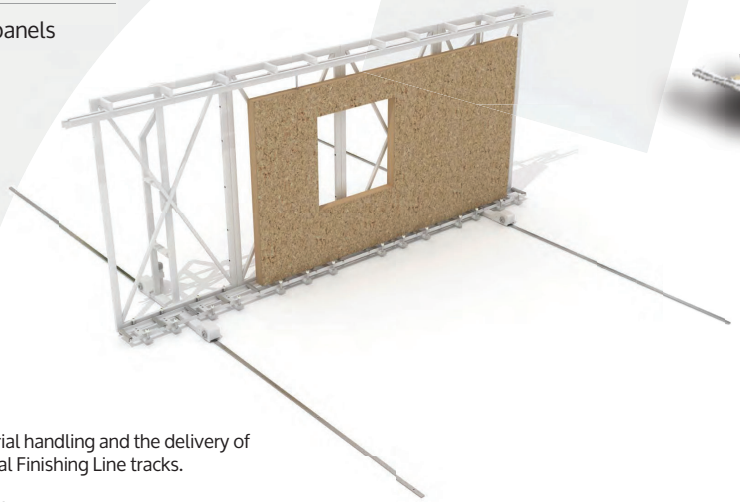
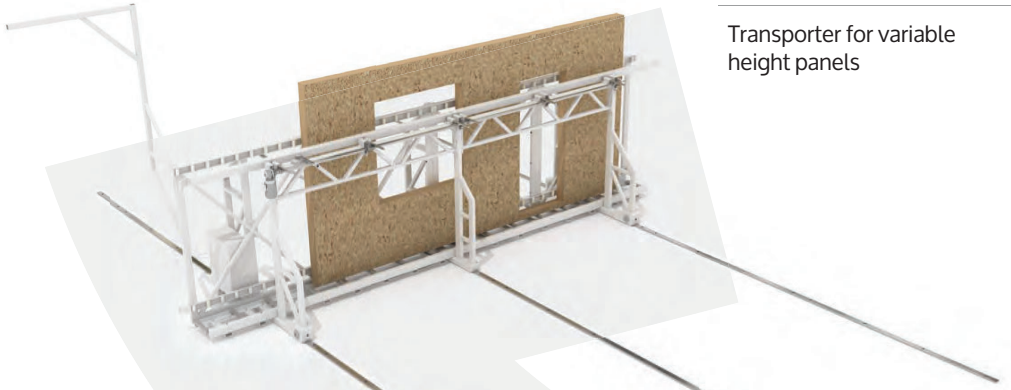
Panel Transporter

Transporter for fixed height panels



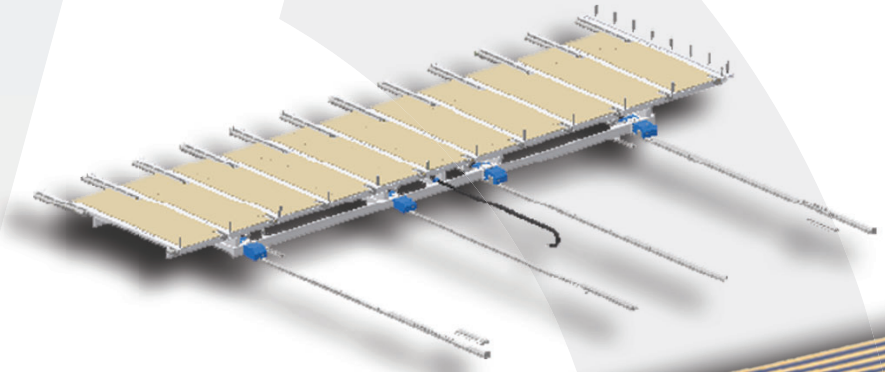
The TRANSPORTER specializes in material handling and the delivery of panels from assembly tables to individual Finishing Line tracks.

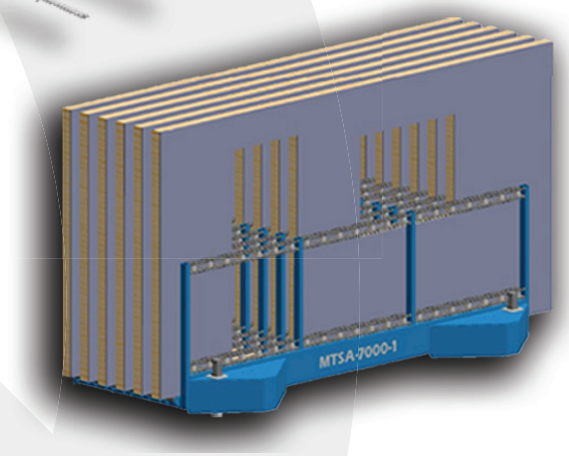
The structure consists of a steel welded frame, which moves along a transverse track. The panel is manually pushed into the frame and transversely moved to the designated position by an electric motor.



Transporter for variable height panels

- Available in standard lengths of 6 m - 9 m - 12 m
- Motorized movement along transverse tracks
- Smooth electronically controlled feed rate control
- Control panel is relocatable
- Load capacity 2000 kg





The Soukup Transporter Series specializes in efficient handling and manipulation of panels and can adapt to your unique layout and production requirements. Panels can be transported and delivered without the downsides of overhead manipulation: safety protocols that lead to production downtime. From compact production spaces to complex layout configurations, there is a TRANSPORTER to address every need.

***Transporter-Motorized Carriage*:** Consists of a robust steel welded frame, with motorized travel along a transverse track. Panels are easily rolled into the frame and transversely moved to the designated position by an electric motor.

***Transporter-WING*:** Combines motorized moving and tilting capabilities into a single station.

***Transporter-MTSA Manual Cart*:** Delivers flexible and efficient panel manipulation where a track system is not accessible or motorized movement is not required. Available in 3 sizes for 1, 3, 6 panels at a time. Ideal for panels under 20' in length, custom options available upon request.

The Transporter Series is compatible for both wood and metal framing systems.
